The RPCI-23 BAC Library has been constructed by Kazutoyo Osegawa and Minako Tateno in the laboratory of Pieter de Jong (http://www.chori.org) from female C57BL/6J mouse kidney and/or brain genomic DNA. The Clone and detailed information can be obtained from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          41. .. 191 note="Sequence derived from one plasmid subclone.

It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

Submitted (11-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

on Oct 9, 2002 this sequence version replaced gi:21744187.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold') within each contig-scaffold'). Within each contig-scaffold by sized gaps filled with Ns to the estimated and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.

On Nov 15, 2002 this sequence version replaced gi:23267207.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.imc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAAAGACCATGTGGTTTTCTGTCCTTGGGTTTATTTGCAAGGTTCATTACACTCCTTGACT 2245
                    NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
  Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

The invention relates to nucleic acid markers which are overexpressed in coarain cancer cells as compared to their expression in normal (i.e. noncarous) ovarian cancer cells. The invention also relates to polypeptides cancer antibodise that selectivaly bind to the conceded by the markers, antibodise that selectivaly bind to the confidence of developing ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention and a method of treating a patient afflicted with ovarian cancer involving inhibiting expression of a gene corresponding to a marker of the invention. The markers are useful for assessing if a patient is afflicted with ovarian cancer which involves comparing the expression of the marker in a patient ample and a normal level of expression of the care corresponds to a secreted protein or a difference between the expression levels inflates ovarian cancer. The level of expression of the marker is detected using an antibody that specifically binds with the fragment corresponds to a secreted protein or to a transcribed polymuclectide or its portion. The level of expression of the marker is assessed by detecting the presence of protein or protein fragment corresponding to the marker. The presence of protein or protein fragment. Alternatively, the level of expression of the marker is assessed by detecting the presence of a transcribed protein or protein fragment. Alternatively, the level of expression of the marker is a sessessed by detecting the presence of a transcribed or the polymuclectide or mitching the marker, under stranger. Conditions. The polymuclectide or mitching expression of the marker is a subsequent time and comparing the level of expression of the marker is a language as a first point in time, repeating the method is earlied out time and comparing the level of expression of the marker in a pubged or antibody of the invention is used to trast ovarian cancer in polypeptide or antibody of the invention and protein or protein become a limit and the sequence at

```
The present invention describes an isolated human PRO polypeptide (I).

Also described: (I) an isolated PRO nucleic (II) acid encoding (II); (2) a vector (III); (3) a host cell (IV) comprising (III); (4) producing (I); (5) a chimeric molecule (V) comprising (II); (4) broducing (I); (5) a chimeric molecule (V) comprising (I) in the decrease (C) in an antagonist of (I), or (VI) in compliation with a carrier; (8) composition of matter comprising (I), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) (1), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) (1), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) (1), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) (1), an agonist of (I), an antagonist of (I), or the antibody (VI); (9) (1), and (II) identifying a compound that inhibits to expression of a gene encoding (I); (I2) identifying a compound that inhibits the activity of (I); (II) identifying a compound that inhibits the activity of (I); (II) identifying a compound that inhibits the activity of (I); and (I2) stimulating the immune response in mammal. (II) has mammal and a compound that inhibits the activity of (I); and (I2) stimulating the immune response in a mammal. (II) is useful for its antagonist to the mammal. (II) is useful for treating an immune related disease in a mammal. (II) is useful for treating an immune related disease in a mammal. (II) is useful for treating mammal having an immune cological, interpolate in a mammal. (II) is useful for treating mammal having an immune related disease in a mammal. (II) is useful for treating mammal having an immune systemic systemic vascultis, osteoathritis, composition, systemic slerosis, idiopathic inflammatory and indicated systemic leaves or immune-mediated skin diseases in indicated systemic systemic cological, indiopathic indicated in an antoimmune parenches and numan PRO protein
                                                                                                                antianaemic; antiarthritic; antiinflammatory; antipsoriatic;
                                                                                                                                                                                                                               spondyloarthropathy; systemic sclerosis; idiopathic inflammatory myopathy; Sjogren's syndrome; systemic vasculities sarcoidosis; autoimmune haemolytic anaemia; sutoimmune disease; immune-mediated skin disease; bullous skin disease; erythema multiforme; context dermatitis; psoriasis; lymphadenopathy; splenomegaly; leukopaenia; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated PRO polypeptide e.g. PRO37544, PRO69493, PRO87327 etc, capable of stimulating an immune response, useful for treating diseases such as rheumatoid arthritis, psoriasis, and leukopenia.
